

Alarm signal lamp 80dB

Art.-No.: 700-02-00

Price: 359,- € net price/piece

The alarm signal lamp is used for connection to the alarm contact of the hot runner controllers of the **TIP** – series and provides an audible and visual alarm in the event of an alarm (e.g.: sensor break, leakage, temperature outside the alarm band, etc.) during production for the safety of the process.

The 4m long connection cable (alarm plug and 230V mains plug), as well as the mounting via a magnet (90N holding force) on the rear side of the housing allows a flexible positioning in the field of view of the production.

The acoustic signal can be switched off via the side toggle switch.

When using the alarm signal lamp Alarm 2 use must be set to **Alarm 2 use:** in the **TIP** – series system menu (from program version 3.2.12 - Download from www.fiege-electronic.com)
